A simple lens consists of a single piece of transparent material, while a compound lens consists of several simple lenses (elements), usually arranged along a common axis. Polarization Polarization is a property of transverse waves that describes the orientation of their oscillations. In the case of electromagnetic radiation, such as light, the electric field vector of the wave oscillates in a plane perpendicular to the wave's direction. For a plane wave, the electric field vector is perpendicular to the magnetic field vector and the direction of propagation, forming a right-handed coordinate system. The orientation of the electric field vector can vary sinusoidally, resulting in linear, circular, or elliptical polarization. Linear polarization is the most common type, where the electric field oscillates in a single plane. Circular polarization occurs when the electric field vector rotates as the wave propagates, resulting in a circular path. Elliptical polarization is a more general case, where the electric field vector traces an elliptical path. Polarization is a key property of light and has many practical applications, including in telecommunications, optical computing, and quantum optics. Fibr optic este o fibra de sticl sau plastic care transport lumin de-a lungul s. Fibrele optice sunt folosite pe scar larg în domeniul telecomunicailor, unde permit transmisii pe distanțe mai mari și la largimi de bandă mai mari decât alte medii de comunicație.
